

POST ARTEFILL CARE

- Avoid excessive sun exposure, UV lamp exposure, tanning, and cold outdoor activities until redness and swelling resolve.
- **After treatment there will be moderate to severe swelling, some redness and bruising.** These symptoms will resolve in about 7 days. Please contact office if these symptoms persist beyond 7 days.
- Ice frequently for comfort and to reduce swelling.
- Take Tylenol, as needed, for discomfort.
- Results are visible immediately, but will improve over the next 4-6 months
- Even though the results of ArteFill has been shown to be effective for five years or more—depending on maintenance work—it's important to realize the limitations of injectables and fillers. While they can provide fullness, they can't lift or tighten sagging skin.
- Advanced wrinkling cannot be reversed and a minimal improvement is predictable in persons with drug, alcohol and tobacco usage.
