

POST PLATELET RICH PLASMA CARE

- Side effects are minimal. Generally you can expect minimal swelling, bruising and redness for 12-72 hours, but it may last longer. This is not a problem. All individuals heal at different rates.
- During the first 24-48 hours after the injection use ice and Tylenol for pain and swelling.
- Results are visible at 6-12 weeks and improve gradually over ensuing months with improvement in texture and tone.
- Advanced wrinkling cannot be reversed and a minimal improvement is predictable in persons with drug, alcohol and tobacco usage.
- Swelling from the fluid is what you will see and feel first. Once the swelling has subsided you will not see much change at all. Over a few weeks the Platelets will stimulate the growth factors which will assist in more collagen growth.
- The number of treatments required depends upon the health and age of your skin. We will determine your treatment protocol according to your skin condition.
- Treatment results vary, however, in most clients the results last up to 18-24months. Yearly touch-up treatments are recommended and will maintain the results.
